How to guarantee an optimal Respiratory Protection?

Respiratory devices are generally not used properly, not adjusted correctly or their size is not adapted to the face of the user. It does not make sense to use RPD if there is some leakage.

FIT TEST Objectives:

• A solution to choose the most appropriate RPD (size, comfort, shape...)
• Allows to check the good usage of the respiratory devices (way to adjust the mask with the PORTACOUNT for example)

FIT TEST 2 different methods:

QUANTITATIVE: Precise value

QUALITATIVE: Pass / Fail
FIT TEST is very useful whenever you have a change in your physical condition that could affect the fit of your respirator. Such change could include:

- Large weight gain or loss
- Major dental work (such as new dentures)
- Facial surgery that may have changed the shape of your face
- Significant scarring in the area of the seal

Contact:
In DELTA PLUS GROUP, different persons are trained to provide you this kind of verification, so please contact your usual point of contact and ask any information about this DELTA PLUS service.
