

PROJECT:

Installation of Spiderline 2 above existing turbine.

OVERVIEW:

The customer required an anchorage point above their existing turbine.

CUSTOMER:

Al Ezzel Power Plant - BAHRAIN

OVERVIEW:

The customer required an anchorage point above their existing turbine.

SITUATION:

As part of the periodic maintenance, it was required by their team to constantly be on top of the turbines and hence a risk of fall. They required an anchorage system that provided ease of work and a single point of anchorage.

SOLUTION:

Understanding their requirement, Spiderline 2 was suggested and points of anchorages were discussed and confirmed.

The Spiderline 2 was installed and desired setting were attained. The mechanical department inspected and approved the work that was completed.
