

Facts

Project : CMM à Vauvert, Renovation of a church

Client : Union Matériaux group- Gervais Matériaux

Situation: The roof of the church has to be secure and provide a safety environment to renovate the building. Vauvert is a city in South of France, and the workers have to renovate the church. They have to go on the roof and work at height.

Solution: Froment provided a complete fall protection solution which includes Spiderline II (horizontal lifeline, lanyard and harnesses).

We installed the lifeline on the roof, to allow them to work safely. The fall protection system would arrest the fall directly preventing him to touch the ground and avoid serious injuries.
